

RANSOMWARE PROTECTION & CYBER RESILIENCE FOR A HIGH-STAKES LITIGATION PRACTICE

CASE STUDY

COMPANY OVERVIEW

A litigation and regulatory law firm handling sensitive financial services and healthcare disputes faced increasing pressure from enterprise clients to strengthen cybersecurity controls and operational resilience.

The firm managed large volumes of confidential evidence, privileged communications, and time-sensitive litigation data across multiple systems making it a high value for ransomware and date-extortion attacks.

CHALLENGES

- Increasing ransomware threats targeting legal firms and privileged data
- Fragmented backup and disaster recovery processes across offices
- Limited visibility into suspicious activity across endpoints and legal applications
- Manual compliance and audit preparation processes
- Concerns around secure storage of eDiscovery and litigation evidence

WHY US?

- TaaS was selected because it combined legal workflow understanding with enterprise-grade cyber resilience capabilities.
- Rather than implementing isolated security products, TaaS embedded resilience directly into the legal operating environment while maintaining litigation workflow speed and accessibility.

RANSOMWARE PROTECTION & CYBER RESILIENCE FOR A HIGH-STAKES LITIGATION PRACTICE (CONTD.)

SOLUTION

The engagement focused on building a secure, resilient legal infrastructure environment designed to withstand modern ransomware threats and operational disruption:

- AI-driven threat detection and centralized SOC monitoring
- Immutable backup architecture for litigation documents and evidence repositories
- Ransomware protection for legal file systems and cloud collaboration platforms
- Secure eDiscovery and digital evidence storage environments
- Continuous vulnerability monitoring and endpoint protection
- Automated disaster recovery orchestration for critical legal systems
- Centralized audit logging and compliance reporting capabilities

BUSINESS BENEFITS

- 70% improvement in audit readiness and compliance reporting speed
- 60% reduction in security-related operational incidents
- Recovery time for critical legal systems reduced from days to hours
- 50% faster detection and response to suspicious activity
- Significant reduction in operational risk tied to litigation evidence management
- Increased client confidence in the firm's cybersecurity posture

"The TaaS team understood the unique risks facing law firms and built resilience directly into our operations. We now have far greater confidence in our ability to protect client data, maintain uptime, and respond to emerging threats." - Chief Information Security Officer, Regulatory & Litigation Firm
